

Maintenance guide for oiled products

Floors are always heavily stressed. With little effort at the beginning, Berg&Berg engineered flooring becomes easy to maintain and extremely durable.

After Installation

Oiled Berg & Berg floors are factory finished with an oxygen cured high soild oil. Nevertheless we recommend to finish the surface with a suitable oil. The effort directly after installation is neglectable and your valuable floor is better protected thereafter.

Regular Cleaning

Normally, vacuuming is enough. Heavier soiling requires a wet cleaning. Wood floor soap is added to the wiping water. With each cleaning process the floor becomes less demanding and more resistant.
