

Regular cleaning for oiled Berg & Berg floors

We recommend using a cotton mop e.g. Faxe SwepMopp. The SwepMopp has soft cotton fibers and an integrated wring mechanism. Its head is removable, can be washed and replaced if worn. If new, allow the cotton head a few minutes in warm water to fully soak and get ready to use.

How to keep your floor in shape

- Use a good door mat at all entries and keep away abrasive dirt from the floor.
- Regularly clean the floor by vacuuming or sweeping.
- All furniture must have clean felt floor protectors or soft furniture castors suitable for parquet flooring.
- Prevent moisture and moisture accumulation, e.g. by coasters under flower pots. Do not leave puddles.
- Maintain a healthy indoor climate: 35 – 65% relative humidity / 18 – 22°C room temperature.
- Adhering dirt shall always be damp wiped.

1. Wash with soap water

Dip the mop into the bucket with soapwater, wring it out lightly and mop the floor until any dirt gently releases from the surface.

2. Remove dirty soapwater

Absorb the dirty water with the mop from the floor, flush the mop in clear water and squeeze it out well.

3. Leave a clean soap protection

Soak the mop in soapwater again and wring it out. Wipe the floor with it evenly and then let the surface dry.

Remark

Do not wipe with clear water only and do not leave any puddles.

If necessary, the water in the buckets should be renewed so that there will be no dirty water spread on the floor. For small areas and low soiling, a single bucket with soapwater is sufficient. For larger areas, it is convenient to use a double carriage for two buckets.
